ENERGY STAR Servers Dataset Assembly Test Method.pd

ENERGY STAR Servers Dataset Assembly Form.xlsx

Dear ENERGY STAR® Computer Server Partner or Other Interested Stakeholder:

EPA is now commencing dataset assembly for the ENERGY STAR Version 2.0 Computer Servers program. Please refer to the attached timeline for relevant deadlines and refer to the other attached documents for EPA's final guidance on the data assembly process. All data must be received electronically via email to servers@energystar.gov by the dates specified.

The test method and data entry documents have been updated to incorporate stakeholder feedback. In the data entry form, please note that a second worksheet has been added to capture I-O device information from systems with multiple installed I-O devices.

EPA wishes to thank all participants for their assistance in formulating a better approach to dataset assembly in support of this program. Your input over the past few months has been instrumental in preparing us for this stage.

All attached materials will be posted to the ENERGY STAR website in the coming days for future reference. Go to www.energystar.gov/RevisedSpecs and click on the link for "Computer Servers." Please contact servers@energystar.gov with any questions.

Thank you for your continued support of ENERGY STAR!
